

# 5TCPvsUDP

September 9, 2025

## 1 TCP

Transmission  
Control  
Protocol

Reliable  
3way handshake  
connection-oriented communication  
Ensure error and flow control

- TCP/IP networks use packet switching as their fundamental data transmission method.
- Data is broken down into packets or datagrams, each of which includes source and destination IP addresses.
- These packets are routed independently through the network, allowing for efficient and robust data transmission.

## 2 UDP

User  
Datagram  
Protocol

unreliable  
connectionless routing uses datagram
