On-Demand Software

software distribution model in which services(the backend) are hosted by a cloud service provider. These services are available to end-users over the internet(they access by frontend which is also hosted or an app) so, the end-users do not need to install any software on their devices to access these service

drive, notion, repit,

1 Advantages

SaaS is easy to buy (monthly) in comparison of one time purchase

The initial set-up cost for SaaS is typically less than the enterprise software

SaaS services are offered as a one-to-many model means a single instance of the application is shared by multiple users.

2 Disadvantages

1. Latency issue:
2. Total Dependency on Internet
3. Switching between SaaS vendors is difficult
